

KCS Student Guidelines Following COVID-19 Exposure

Quarantine Guidelines

The recommended duration of quarantine is 14 days after last exposure. However, the following options are also available to reduce the duration of quarantine in either of the following two scenarios:

- 10 days of quarantine have been completed and no symptoms have been reported during daily at home monitoring;
- 7 days of quarantine have been completed, no symptoms have been reported during daily at home monitoring, and the individual has received results of a negative antigen or PCR/molecular test on a test taken no earlier than day 5 of quarantine.

If quarantine is discontinued before day 14, the individual should continue to monitor symptoms and strictly adhere to all non-pharmaceutical interventions (e.g. wear a mask, practice physical distancing) through 14 days after the date of last exposure.

**Close contact is defined as being within 6 feet for at least 15 minutes (cumulatively over a 24-hour period) of someone who is determined positive with COVID-19 either through testing or symptom consistent diagnosis.*
